Get out of the phone business.

Simplicity Voice provides high quality voice communications to your enterprise desk phones, smartphones, and softphones. Full-featured PBX functionality delivered via our resilient multi-data center cloud infrastructure for a fraction of the cost of purchasing and maintaining complex legacy telephony equipment.

Simplicity Voice is an on-demand service offering companies unlimited call capacity and the flexibility to turn up and turn down service as business dictates. Add users – including distributed and mobile employees – quickly and easily regardless of where they are located. Simplify service delivery by combining voice and data networks onto a single private connection. End the management headaches of system ownership while retaining complete control via our secure online portal.

Simplicity Voice eliminates the need to purchase costly PBX equipment and software licenses or extend current maintenance contracts. Instead, we handle the technology investments, upgrades, and ongoing maintenance, including moves, adds, and changes. Your enterprise benefits from a high quality, robust voice service delivered via our scalable, end-to-end Quality of Service (QoS) enhanced network at much less cost.

Global Reach

Simplicity Voice is specifically designed to meet the realities of multi-site enterprises with workforces dispersed around the world. Our backbone infrastructure is deployed in global data center facilities to deliver robust response, high availability, and service redundancy. With Simplicity Voice, you can bring all of your locations and employees together under one phone system, with no need to purchase separate systems for individual office locations or remote workers. One simple, scalable, cloud voice service to connect it all.
